

**Amendments to the Claims**

This listing of claims replaces all prior versions, and listings, of claims in the instant application.

- 1       1.       (Currently Amended) A method of cooling at least one heat-generating device using a  
2               cooling system, the method comprising the steps of:  
3                     using at least one pump to cause a fluid to flow in a sealed cooling system  
4                     including at least one heat exchanger; and  
5                     adjusting a pressure of the flowing fluid to correspondingly adjust a boiling  
6                     point temperature of the fluid in the at least one heat exchanger, wherein the fluid  
7                     and gas generated from boiling remain sealed within the cooling system.
  
- 1       2.       (Original) The method of claim 1, wherein the step of adjusting a pressure of the fluid  
2               comprises adjusting operating conditions of the at least one pump in response to at least  
3               one of:  
4                     changes in pressure of the fluid;  
5                     changes in temperature of the fluid;  
6                     changes in temperature of the at least one heat-generating device; and  
7                     changes in temperature of the at least one heat exchanger.
  
- 1       3.       (Original) The method of claim 1, wherein the step of adjusting a pressure of the fluid  
2               comprises adjusting an orifice coupled to the at least one heat exchanger in response to at  
3               least one of:  
4                     changes in pressure of the fluid;  
5                     changes in temperature of the fluid;  
6                     changes in temperature of the at least one heat-generating device; and  
7                     changes in temperature of the at least one heat exchanger.
  
- 1       4.       (Original) The method of claim 1, wherein the method further comprises the step of:  
2               providing at least one heat rejector for rejecting heat from the system to ambient air, the  
3               at least one heat rejector being situated downstream of the at least one heat exchanger.

- 1 5. (Currently Amended) The method of claim 4, wherein the method further comprises the  
2 step of providing a reservoir that accommodates a larger volume of a the gas in the  
3 system generated during boiling.
- 1 6. (Original) The method of claim 5, wherein the reservoir reduces a change in pressure of  
2 the fluid that occurs during boiling.
- 1 7. (Original) The method of claim 5, wherein the reservoir is situated downstream of the at  
2 least one heat rejector.
- 1 8. (Original) The method of claim 5, wherein the reservoir is situated upstream of the at  
2 least one heat rejector.
- 1 9. (Currently Amended) The method of claim 5, wherein the reservoir having a volume  
2 region as great as the volume of ~~vapor~~ gas generated by the at least one heat exchanger  
3 during boiling of the fluid.
- 1 10. (Original) The method of claim 5, wherein the reservoir having an inlet coupled to a fluid  
2 outlet port of the at least one heat rejector via a first portion of a fluid transport line and  
3 an outlet coupled to a fluid inlet port of the at least one pump via a second portion of the  
4 fluid transport line.
- 1 11. (Original) The method of claim 5, wherein the reservoir is integrated with one of the at  
2 least one heat rejector and the at least one pump.
- 1 12. (Original) The method of claim 1, wherein the system is hermetically sealed.
- 1 13. (Original) The method of claim 12, wherein the hermetically sealed refers to a design in  
2 which the pressure under a given set of pump, ambient temperature, and heating  
3 conditions varies by less than 1 psi during a five year lifetime.

- 1     14.     (Original) The method of claim 1, wherein the fluid is selected from a group consisting of  
2             water, acetonitrile, acetone, N-methylformamide, benzene, ethanol, methanol, and a  
3             combination thereof.
- 1     15.     (Original) The method of claim 1, wherein the fluid comprises a halocarbon.
- 1     16.     (Original) The method of claim 15, wherein the halocarbon is a methane series  
2             halocarbon selected from the group consisting of trichlorofluoromethane and  
3             trifluoromethane.
- 1     17.     (Original) The method of claim 15, wherein the halocarbon is a ethane series halocarbon  
2             comprising pentafluoroethane (R-125).
- 1     18.     (Original) The method of claim 1, wherein the fluid is a zeotropic blend comprising R-  
2             404A.
- 1     19.     (Original) The method of claim 1, wherein the fluid is an azeotropic blend selected from  
2             the group consisting of R-500 and R-502.
- 1     20.     (Original) The method of claim 1, wherein the fluid is inorganic.
- 1     21.     (Original) The method of claim 20, wherein the inorganic is selected from the group  
2             consisting of ammonia and carbon dioxide.
- 1     22.     (Original) The method of claim 1, wherein the fluid comprises a hydrocarbon.
- 1     23.     (Original) The method of claim 22, wherein the hydrocarbon is selected from the group  
2             consisting of methane, ethane, propane, n-butane, 2-methylpropane, isobutane, ethene,  
3             ethylene, propene, propylene, and combinations thereof.
- 1     24.     (Original) The method of claim 1, wherein the fluid is cryogenic.

- 1      25.      (Original) The method of claim 24, wherein the cryogenic is selected from the group  
2                   consisting of hydrogen, parahydrogen, helium, nitrogen, neon, air, oxygen, argon, and  
3                   combinations thereof.
- 1      26.      (Original) The method of claim 1, wherein the fluid is selected from the group consisting  
2                   of water, acetonitrile, acetone, N-methylformamide, benzene, ethanol, methanol,  
3                   halocarbons, zeotropic blends, azeotropic blends, inorganic fluids, hydrocarbons,  
4                   cryogenic fluids, and mixtures thereof, the halocarbons being methane series halocarbons  
5                   selected from the group consisting of trichlorofluoromethane, trifluoromethane and  
6                   mixtures thereof, the zeotropic blends comprising R-404A, the azeotropic blends being  
7                   selected from the group consisting of R-500, R-502 and mixtures thereof, the inorganic  
8                   fluids being selected from the group of ammonia, carbon dioxide and mixtures thereof,  
9                   the hydrocarbons being selected from the group consisting of methane, ethane, propane,  
10                  n-butane, 2-methylpropane, isobutane, ethene, ethylene, propene, propylene and mixtures  
11                  thereof, the cryogenic fluids being selected from the group consisting of hydrogen,  
12                  parahydrogen, helium, nitrogen, neon, air, oxygen, argon and mixtures thereof.
- 1      27.      (Original) The method of claim 1, wherein the method further comprises the step of:  
2                   providing sensors to adjust the fluid flow from the at least one pump.
- 1      28.      (Original) The method of claim 27, wherein the sensors being coupled to the at least one  
2                   heat exchanger.
- 1      29.      (Original) The method of claim 1, wherein the at least one pump is electro-osmotic.
- 1      30.      (Original) The method of claim 1, further comprising the step of: delivering to a catalytic  
2                   recombiner a gaseous stream containing hydrogen being discharged from a downstream  
3                   side of the at least one pump together with an amount of oxygen generated from an  
4                   upstream side of the at least one pump sufficient to convert the hydrogen and oxygen to  
5                   water, the catalytic recombiner coupled to an inlet port of the at least one pump.
- 1      31.      (Original) The method of claim 1, wherein the step of adjusting a pressure of the fluid  
2                   comprises adjusting the pressure of the fluid during a charging and sealing of the system.

- 1      32.      (Original) The method of claim 1, wherein the step of adjusting a pressure of the fluid  
2                   comprises adjusting at least one of a composition and volume and combinations thereof  
3                   of at least one of a gas and liquid and combinations thereof introduced during charging of  
4                   the system.
